

Task-Based Testing

1. Overall structure

1. Introduction (2 min)
2. Short explanation of system (2 min) (**DO NOT explain the interface**)
3. Task session (5-10 min)
4. Questionnaire (5 min)

Total per participant: **~20 minutes**

2. Tasks for the coffee system (Start +7days in settings)

Task 1 – How to make an espresso

Instruction to participant:

Please show how you would make an espresso using the interface.

Observe:

- Do they find **One Cup button**
- Do they adjust sliders
- Do they understand messages (Cup present?)

Task 2 – Change coffee strength and Amount

Instruction:

Please set the coffee intensity to 80% and amount to 100ml

Tests:

- slider usability
- value feedback

Task 3 – Prepare a coffee of your choosing. (Latte macchiato, flat white or cortado preferred)

Instruction:

Please prepare a coffee recipe. (refer to how to section)

Tests:

- recipe presets
- instructions
- steam process
- “How to” guidance

Trigger a situation like:

- no cup
- old water (+7days in settings)
- machine cleaning required (+7days in settings)

Instruction:

The machine shows a warning. Please continue making a coffee.

Tests:

- understanding of warning dialogs

Task 4 – Save a custom Setting

Instruction:

Please create, save and delete a custom setting with 70% intensity and 100 ml coffee.

Tests:

- preset saving
- preset UI
- discoverability
